How to request a 3D print

Submit the Request form to the left providing all the necessary details.

After the form is submitted it is redirected to the demonstrator for approval

Please do not start printing until the demonstrator chacks all the details and approves the request

If your job was approved but something went wrong with the print itself, ask the demonstrator to cancel the job. In such a way you will be charged only for the printing time spent before cancelling the job and not for the whole job.
